Description

Basacote© High K 6M 13.5.18 plantation fertilizer.

Slow diffusion pellets, active for 6 months. Trees and shrubs, bonsaï, perennials, foliage and flower plants. The plantation fertilizer, based of Basacote©, is a complete fertilizer (Boron, copper, iron, manganese, molybdenum, zinc). Fertilizer poor in chlorine with a coating that guarantees a 6 months activity. Fertilizer for professionals, Basacote© is used by nursery men and incorporated in substrates by compost makers. Basacote© plantation fertilizer can be used : in spring or in fall during the plantation of ornamentation trees, fruit trees, grapevine, shrubs, perennials plants and bonsaï. It can also be used as maintenance manure : at the base of the trees and the shrubs, all along the year and after plantation. How to use the product for plantation : put on the ground or bury a tabs for 2 litres of soil or 5 tabs for a pot of 50 cm and then cover it with a little of soil (+/- 1 cm). Do not put the product in direct contact with naked roots. In case of renewing the surface layer, after application hallow the soil to bury briefly the pellets. Before repoting : mix 2 to 4 pellets in a bucket for 4 to 5 litres of compost. A bucket of Basacote© can fertilize 80 litres of soil. A Basacote© bucket contains about 40 tabs or 300 grams. A regular use of Basacote© will help you to avoid a lot of maintenance and cultivation problems by helping a vigorous plant to better resist to many exterior attacks.
