Description

Height of the tree without its pot : 360 mm. Width of the branches : 570 mm. Non-enamelled pottery of : 433 x 208 x 72 mm. 6-trunks netsuranari style. Juniper with a graceful silhouette, formed by master Chiaru in the Tokyo's region. Itoigawa species with its thin well-colored green scales, particularly vigorous and perfectly adapted to the bonsai cultivation. Unlike Juniperus chinensis type, it loses only little foliage at the beginning of summer. This tree is composed of a formed bark because it is aged of more than 20 years old. Not any strong wire injury nor cutting wound, currently ligatured with copper wire. Admire its sinuous trunks and their movements.

Shelf non-included. Photographed in november 2022.
