Description

Tree height (excluding pot): 240 mm

Branch spread: 260 mm

Handmade unglazed pot from Yixing, China, signed quality: Ø 160 x 60 mm

Style: Moyogi

Juniper with graceful branch pads and jins.

Itoigawa variety with fine, vibrant green scales, particularly vigorous and perfectly suited for bonsai cultivation. Loses very little foliage in early summer, unlike the *Juniperus chinensis* type.

Bark well developed as this specimen is over 15 years old. No major wire scars or pruning wounds.

Originates from the nursery of Master Fujiwara! A true bonsai with original jin and shari, not to be confused with tanuki.

Repotting was done in April 2023 and should be done again in April/May 2025.

Admire the trunk twisted on itself with its shari, a unique character of this bonsai.

Whitening of deadwood jin with product, tinted with charcoal, will give a beautiful ash-grey color.

Do you already have this complete book on Junipers?

Display stand not included.

Photographed in August 2023.
