Description

UNIVERSAL FERTILIZER NUTRICOTE 13.11.11 with MgO (2) and SO₂ (12), contains trace elements.

6 MONTHS OF ACTION For trees and shrubs, perennials, green and flowering plants, and roses. Nutricote Universal Fertilizer is a complete fertilizer (NPK, magnesium, and trace elements). It is a low-chlorine fertilizer with a special coating that ensures a long-lasting effect for up to 6 months. A professional-grade fertilizer, Nutricote is used by nurseries and incorporated into substrates by potting soil manufacturers. The universal fertilizer can be used: In spring or autumn, during the planting of ornamental trees, fruit trees, grapevines, shrubs, and perennials. As maintenance fertilization, applied annually at the base of trees and shrubs after planting. During repotting (pots, planters, hanging baskets...) of flowering plants (geraniums, petunias, pansies...), by mixing the planting fertilizer into the substrate. Application instructions: At planting: Apply 80 g of fertilizer (equivalent to 4 full scoops), then cover with a light layer of soil (5 cm). Important: Never place the granules directly in contact with bare roots. If applying as topdressing: After application, lightly work the fertilizer into the soil to a depth of about 1 cm. Mixed into potting soil: Before repotting, mix 20 g of fertilizer (1 scoop) into 4 to 5 liters of potting soil in a bucket or wheelbarrow. For a 50 cm planter, use 2 scoops. Previously sold exclusively to professionals, this product is now available to the general public. One 1 kg bucket is enough to fertilize 200 liters of soil. Nutricote is our flagship professional fertilizer. Its coating allows a gradual release of nutrients, providing them to the plant over several months according to its needs. FERTIL is the exclusive importer of this product for France (manufactured in Japan). Many growers trust this fertilizer and have it incorporated into their substrates. We are now making one of our formulas available to dedicated amateur gardeners. The 13-11-11 balance is a well-rounded formula, releasing nutrients over an average of 4 to 6 months.
