Description

My favorite! Try it on a pine or juniper and see for yourself how effective this product is! Thanks to its healing hormones, it ensures fast and flawless wound healing. Highly appreciated for its impressive results, this product is renowned for promoting the fastest and most beautiful healing. Content: 160 g jar
Instructions for Use: Preparation: Take a small amount of paste and knead it in the palm of your hand to soften it, making it easier to apply. Application: Spread a thin layer of the paste on clean, dry cuts. Practical Tip: To prevent the paste from sticking to your fingers, place a damp cloth over the paste once applied. This will help you press it firmly into place, ensuring it adheres properly to the wound for successful healing. Storage: The product can be stored for several years in its jar, provided it is tightly closed and kept away from heat and cold.
